U.S. Patent and Trademark Office PTOL-303 (Rev. 11-03) Continuation of 2. NOTE: the proposed additional language to claim 10 is considered new matter based upon the same reasoning as is found in the final rejection. With respect to the arguments presented, the application does not set forth basis for "less than 30% by weight" as set forth in the previous office action, such a limitation would include any number below 30 to 0. Therefore, there is no support for all other values that aren't covered by the table. Likewise it should not be left up to the reader to try to ascertain what values are present as per percentage that could lead up to any number of values including those exceeding 30%. The suggestion that having one number below the claim limitation is support for a broader wider range is not persuasive, and such is still considered new matter. Based upon the table being relied upon the lowest value that could ever be reached is 28%, however, it should be noted that the range taught by the specification and the table extends higher than 30% and it is also considered new matter to set a limit that was not previously set forth in the specification merely to overcome a reference, meaning to arbitrarily choose a limit that did not exist in the case before which is not representative of what the original specification supports would be new matter. With respect to mechanical expedients it is set forth that the test for whether expedients exists is based upon applicant's specification and whether it teaches that the value is critical to the functioning of the claimed subject matter, not whether it is critical to the prior art reference, and the minor change that would be required to meet the claim language, specifically the prior art would need to be modified by any tiny amount less than it's lower limit is not considered to prevent the prior art from functioning.
